

## Pushing Code to Github Via Terminal

1. Open terminal and do → “cd C:\Users\PrinceKylo\Motion-Security-Detection” or any repository you want to add code to. Remember to save the code first on the IDE and also clone the repository to file management if you haven't already.
2. Now → “git add .”
3. Then → “git commit -m “test2””
4. Last → “git push origin main”
